ABSTRACT

This paper contains a systematic list of species and the literature references of the spiders precinctive in India. Spiders from 58 families, 340 genera and 1238 species are precinctive in India. However, there is an urgent need to revise all these species.

Key words: Precinctive spiders, India

INTRODUCTION

The first information on the precinctive spider fauna of India came from the female specimen of *Oxyopes indicus* (Walckenaer, 1805). Thereafter, the work of Sundevall (1833); Walckenaer (1841); Blackwall (1864, 1867); Simon (1864, 1885, 1887, 1888, 1889, 1892, 1893, 1895, 1897, 1900, 1901, 1902, 1905, 1906); Frauenfeld (1867); Thorell (1868, 1891); Stoliczka (1869) O. P.-Cambridge (1870, 1872, 1873, 1874, 1877, 1885, 1890, 1892, 1896); Butler (1873); Wood Mason (1877); Keyserling (1890); Walsh, (1891); Peckham & Peckham (1895); Pocock (1895, 1899, 1900, 1901); Leardi (1901, 1902); Strand (1907, 1912); Hirst (1909); Narayan (1915) Gravely (1915, 1921, 1924, 1927, 1931, 1935); Chamberlin (1917); Hogg (1922), Hingston (1927); Sherriffs (1927); Mukerjee (1930); Reimoser (1934); Caporiacco (1934, 1935); Bhattacharya (1935); Roewer (1942) and Fage (1946) initiated the spider research during British India. These workers reported 408 spider species from India which are endemic to India. Later on, spider research was geared up in India from 1962 by the work of Tikader (1960-1991), Gajbe (1975-2008), Biswas (1984-2004) and Patel (1972-2005) who reported more than 500 spider species precinctive in India. Siliwal and co-workers (2005-2015) reported 21 Mygalomorphs endemic to India. In addition to the Indian workers, large number of arachnologists outside India have also reported spiders precinctive in modern India. Prominent among them are Prószyński, Platnick, Jäger, Peckham & Peckham, Huber & Baehr.

This paper lists the records of precinctive spiders from India along with related literature. Precinctive is the ecological state of a species being unique to a defined geographic location, such as an island, country or other defined zone, or habitat type. This contribution is the result of a critical revision of all data available on world spider catalog for the precinctive spiders in India.

RESULTS

Precinctive spiders in India comprises of 1238 species from 58 families and 340 genera. The most characteristic families are Thomisidae, Salticidae and Gnaphosidae containing 11.66%, 11.50% 10.51% precinctive species respectively among the total 1238 precinctive known spider species in India. Table-1 gives the family wise list of data of precinctive spider

species in India. taking in to consideration the total diversity of all spider species (1698) from India the present finding of precinctive species is almost 72.9%. This appears to be very high endemism.

The genus *Zelotes* Gistel, 1948 is the most numerous and can be regarded as a faunistic phenomenon since from all 28 species established in India, are endemics, distributed mainly on the ground below the stones. Astonishingly, females of 27 species out of 28 are known. Only male of *Z. pexus* (Simon, 1885) is on record.

Other examples are *Marpissa* C. L. Koch, 1846 17 species out of 17; *Ozyptila* Simon, 1864 9 species out of all 9; *Thomisus* Walckenaer, 1805 41 species out of 45; *Miagrammopes* O. P.-Cambridge, 1870 all 9 out of 9; *Phidippus* C. L. Koch, 1846 7 species out of 8; *Tibellus* Simon, 1875 7 out of 8; *Uloborus* Latreille, 1806 9 species out of 10 and *Thanatus* C. L. Koch, 1837 8 species out of 10 are precinctive.

Family- Agelenidae C.L.koch, 1837

Genus: *Agelena* Walckenaer, 1805

Agelena barunae Tikader, 1970 (Female is known)

Agelena gautami Tikader, 1962 (Both Male and Female are known)

Agelena inda Simon, 1897 (Both Male and Female are known)

Agelena oaklandensis Barman, 1979 (Both Male and Female are known)

Agelena satmila Tikader, 1970 (Female is known)

Agelena shillongensis Tikader, 1969 (Both Male and Female are known)

Genus: *Tegenaria* Latreille, 1804

Tegenaria comstocki Gajbe, 2004 (Female is known)

Tegenaria hemanginae Reddy & Patel, 1992 (Both Male and Female are known)

Tegenaria shillongensis Barman, 1979 (Both Male and Female are known)

Family- Amaurobiidae Thorell, 1870

Genus: *Amaurobius* C. L. Koch, 1837

Amaurobius koponeni Marusik, Ballarin & Omelko, 2012 (Male is known)

Genus: *Himalmartensus* Wang & Zhu, 2008

Himalmartensus mussooriensis (Biswas & Roy, 2008) (Female is known)

Family: Anyphaenidae Bertkau, 1878

Genus: *Anyphaena* Sundevall, 1833

Anyphaena soricina Simon, 1889 (Female is known)

Rainer Breitling (2015) has recently reviewed the status of *Linyphia* in India. Accordingly the existence of the genus *Lynyphia* in India is doubtful. The example itself indicates that the Indian spiders should be revised. All the five endemic species of the genus *Linyphia* are not existing in India. This is made possible due to the literature made available by World Spider Catalog. Taking the advantage of this literature, revision of all spider species from India is necessary as the descriptions of Indian Species seems to be araneous.
